

HEAT BUSTER

HEAT PROTECTION GEL

act like a thermal barrier

Description :

Heat Buster is a unique polymer gel, formulated to create a thermal barrier and protect adjacent surfaces from torch flames or heat. Easy-to-apply gel to prevent heat damage when repairs need to be made in high-risk areas where temperatures get very hot.

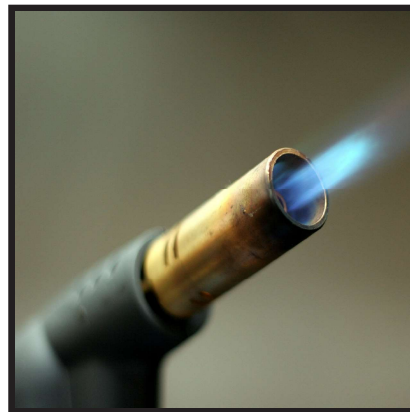

Heat Buster helps prevent damage to adjacent areas to the welds on damaged vehicle sections. It reduces and prevents heat distortion and prevents weld spatter from adhering to surfaces.

Advantages :

- Saves time, eliminating the cost of disassembling valves or gaskets.
- Reduces the danger of fire in places adjacent to welding such as wooden studs, drywall walls, insulation, glass and plastics.
- Viscous gel that effectively adhere to vertical or horizontal surfaces.
- Safe for the skin, non-toxic, non-corrosive and biodegradable.

Instructions :

- Spray Heat Buster on the surfaces to be protected, approximately 3cm from the place where the heat source is applied.
- Be sure to cover the entire surface, if necessary add gel during the welding operation.
- After use clean with a dry cloth or leave to air dry.
